Sprint 1 Review

GeoBus iOS

What things should we stop doing?

We attempted to add additional functionality to the application during the sprint. This slowed down the team progress and overall quality work due to lack of complete focus on functionality that the team agreed upon at the beginning of the sprint.

What should we start doing?

Communicating more between each team members. Although we have mandatory meeting three times a week, we still need to let other team members know if someone encounters a fatal error or is completely stomped.

What is working well that we should continue to do?

Continue giving constant input to each team member's work. It helps the team understand everyone's code and helps with the documentation.

What work was completed, and not completed?

Completed: Organized into two teams, iOS and Android team

Meet with Kerry Veenstra

Implemented Bus stop markers and the information box

Implemented Google Map onto the application

Incomplete: Did not finish implementing current location

Did not finish implementing one functioning bus

Did not finish implementing an arrow on a bus

What is our rate of completing work?

Rate of work completion (Story points/day) = 27 / 14 = 1.93 story points/day

Rate of work completion (Ideal work hours/day) = 26/14 = 1.86 ideal work hour/day
